ABOUT ME

Creative problem solver with a business background who decided to utilise their Excel enthusiasm properly and go for coding. Programmed the first time at 12 years old, always done IT as a hobby and took courses at the Uni, but only this year decided to do it seriously and make a career out of it.

In personal projects I've used **React (JS & TS), Node, MongoDB and MySQL** as well as **Git**. In (past) study projects I've gotten some familiarity with **C#** and **Python**. Very capable of quickly adopting new concepts and all things IT. Take a glance at my portfolio site or GitHub to see where I'm at!
